

UNIV 14.3 kWhFS - PV Storage

Model: UNIV 14.3 kWhFS

Short Description

The UNIV 14.3 kWhFS is a high-performance PV storage system designed for households and businesses with high energy demands. With its large storage capacity and efficient self-consumption optimization, it delivers reliable performance even under highly fluctuating loads.

Technology Meets Application

- 14.3 kWh usable capacity for larger PV systems
- 200 A charge/discharge current for high-power applications
- Scalable up to 16 units
- Passive air cooling - maintenance-free and silent
- BMS provides reliable protection against overcharging and overheating

Applications

- Single-family homes with high self-consumption
- Commercial buildings with peak loads
- PV backup power systems
